8. Examiner's Statement of Reasons for Allowance:

Independent claim 1 recites monitoring a call forwarded to a network-based voice mail system (VMS) and limitations for the following: "after the call is forwarded to the voice mail system (VMS), means for determining if the call was forwarded prior to being forwarded to the VMS, and if the call was forwarded prior to being forwarded to the VMS, means for denying call monitoring". The prior art of record does not teach these limitations.

Independent claim 13 recites monitoring a call forwarded to a network-based voice mail system (VMS) and limitations for the following: "after forwarding the call to the VMS, determining whether the call was forwarded prior to being forwarded to the VMS, and if the call was forwarded prior to being forwarded to the VMS, then denying call monitoring". The prior art of record does not teach these limitations.

Independent claim 18 recites monitoring a call forwarded to a network-based voice mail system (VMS) and limitations for the following: "after forwarding the cal to the VMS, receiving a call monitoring provisioned signal from the VMS indicating that call monitoring is allowed; and in reponse to receiving the call monitoring provisioned signal from the VMS; sending a call monitoring alert signal and an activate call monitoring data message to customer premises equipment (CPE) associated with the called party". The prior art of record does not teach these limitations.

Independent claim 26 recites monitoring a call forwarded to a network-based voice mail system (VMS) and limitations for the following: "when the voice message greeting begins playing, sending a start of greeting signal from the VMS to the central office switch so that call monitoring is allowed if the central office is provisioned to begin call monitoring upon receipt of the start of the greeting signal; and sending an end of greeting signal upon completion of the voice message greeting from the VMS to the central office switch so that call monitoring is allowed if the central office switch is provisioned to begin call monitoring upon receipt of the end of greeting signal". The prior art of record does not teach these limitations.

Independent claim 30 recites monitoring a call forwarded to a network-based voice mail system (VMS) and limitations for the following: "receiving an activate call monitoring data message from the CO at the CPE; and in response to receiving the activate call monitoring data message, providing call monitoring to the called party, wherein the CPE automatically goes off-hook and engages a speaker assembly to provide call monitoring to the called party". The prior art of record does not teach these limitations.

Independent claim 39 recites monitoring a call forwarded to a network-based voice mail system (VMS) and limitations for the following: "after forwarding the cal to the VMS, receiving a call monitoring provisioned signal from the VMS indicating that call monitoring is allowed; and prior to disconnecting the VMS, receiving the voice mail code, wherein the voice mail code indicates whether the voice mail message left by the calling party should be saved or erased". The prior art of record does not teach these limitations.

New search updates revealed no other prior art which teaches the limitations in the context of the claims. Therefore, claims 1-21,24 and 26-39 are indicated allowable.
